What is Copyright?

Copyright is a set of laws that restricts what we can do with works that others have produced (for example: books, articles, music, films and material on the internet. This limits what you can legally reproduce.

“Reproduce” - includes photocopying, audiotaping, scanning, downloading, or saving to disc

For research and study the “Fair Use” stated amount you can reproduce is:
- one chapter of a book, or 10 of the pages (10% of the words if the work is in electronic form)
- one article from a journal or newspaper (more if the articles are for the same assignment)
- all of an artistic work, for example: diagram or photo (when not available for separate purchase);

Specific examples:

**Copying from the internet:**
Just because material on the internet is freely available, doesn’t mean that you may simply copy it. Use the same limits listed above. You can also check for copyright statement on the website about using material. Some sites allow more generous copying for research and study.

**Copying from library databases:**
Generally these databases allow the copying limits listed above but always check the terms of the database agreement as they are covered by individual licences.

**Student work**
Any essay, painting or any original work you create is automatically protected by copyright. Staff must get written permission from you, if they want to copy or communicate it.

**If a book is no longer published, can I copy the whole book for my research?**
Generally, yes. However, if you are aware that it is about to be republished within a reasonable time, it is unlikely you can copy the whole book.

**Do I have to acknowledge the source of something I quote in my essay?**
The Government introduced “moral rights” into the Copyright Act in December 2000, and as a result you need to attribute the author of material you copy, unless it is reasonable not to do so. In any case, as a matter of professional or academic standards, this material should be properly cited.

**Can I copy material onto my own disk from a CD-ROM?**
You should first check the CD-ROM licence to see what it allows people using the CD-ROM to do, and what it expressly prohibits. If there is nothing in the licence agreement which limits what you can copy, you may copy or print material from a CD-ROM if it is for your research or study and the use is fair.

**Can I get someone else to copy material for me, for my research or study?**
A person working in a library may copy certain types of material for you (such as print material or artistic works) for your research or study, under special provisions for libraries in the Copyright Act. You will need to sign a written request stating that you need the material for your research or study and will not use it for any other purpose. If the work you want to copy is commercially available, the librarian can only copy a “reasonable portion” of it.

For further information about copyright, and about our other publications and training program, see our website – [http://www.copyright.org.au](http://www.copyright.org.au) or the Act at [Copyright Act 1969](http://www.copyright.org.au).
